

SO, YOU WANT TO PUT TROYCABLE.NET EMAIL ON YOUR PHONE! (Iphone and Android)

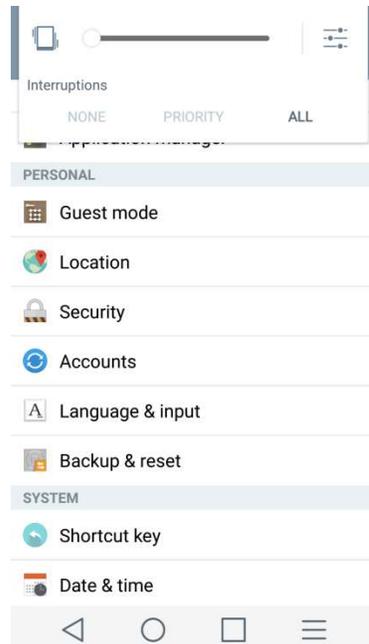

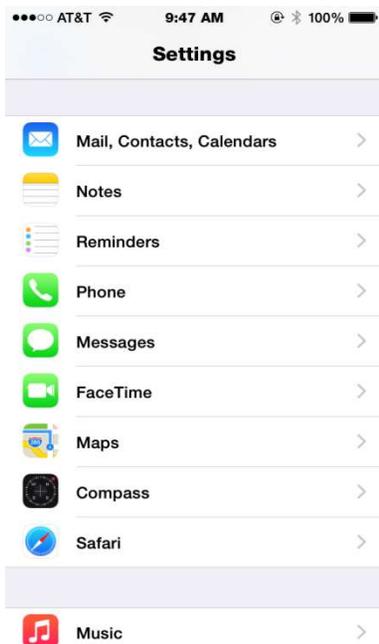

WE CAN DO THIS!

(For pictures, Iphone will be on the Left, Android on the right)

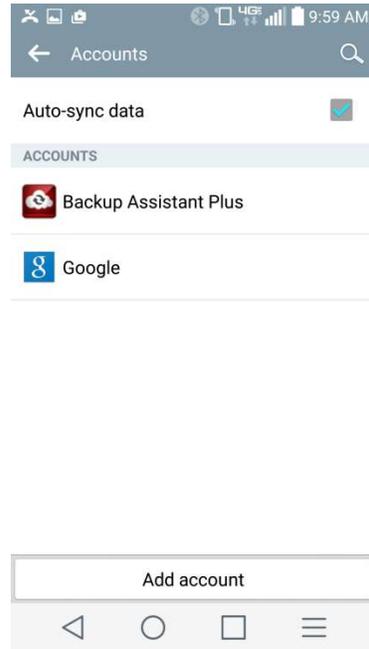

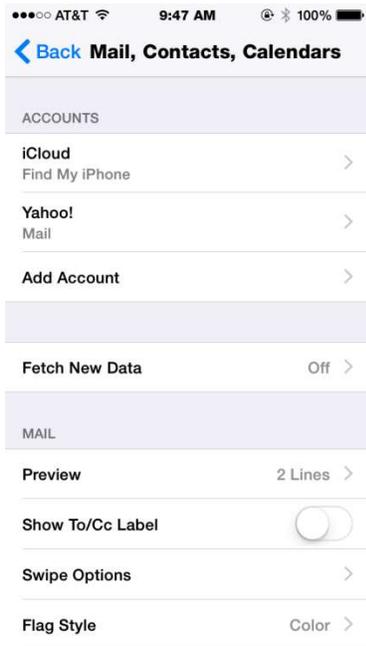

Step 1: Locate the settings button on your phone (both say **Settings**)

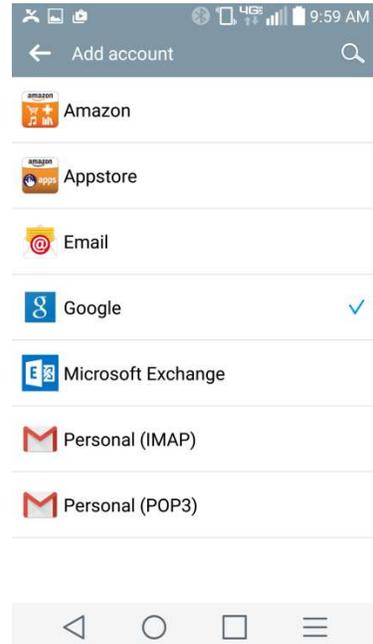

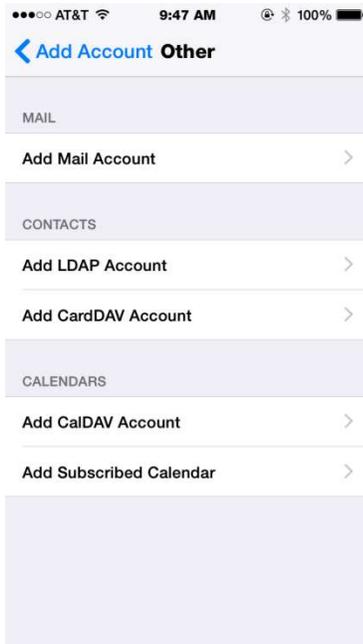

Step 2: Locate the Mail Setting for your phone (**Mail, Contacts Calenders** for **Iphone**, **Accounts** for **Android**)

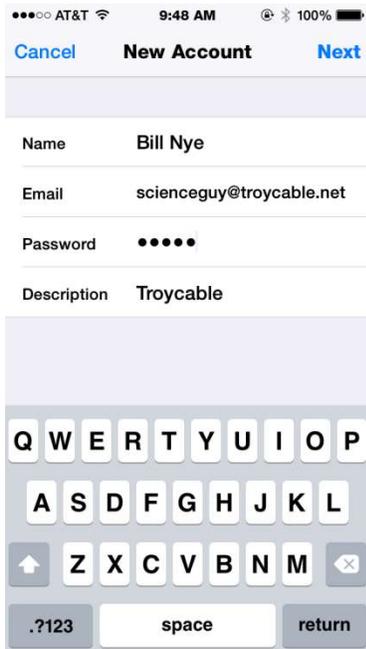

Step 3: Click Add Account

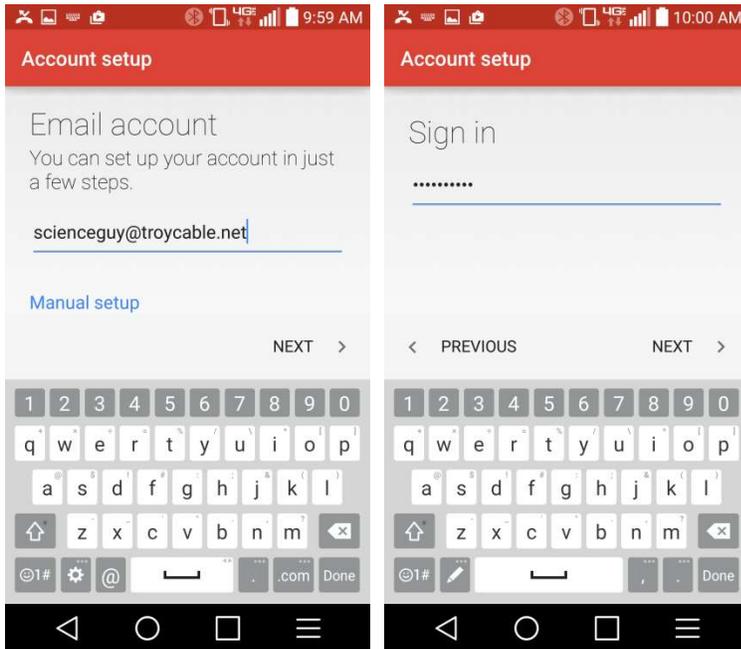

Step 4: Choose Type of Account (**Other** for iPhone then **Add Mail Account, Personal (IMAP)** for Android)

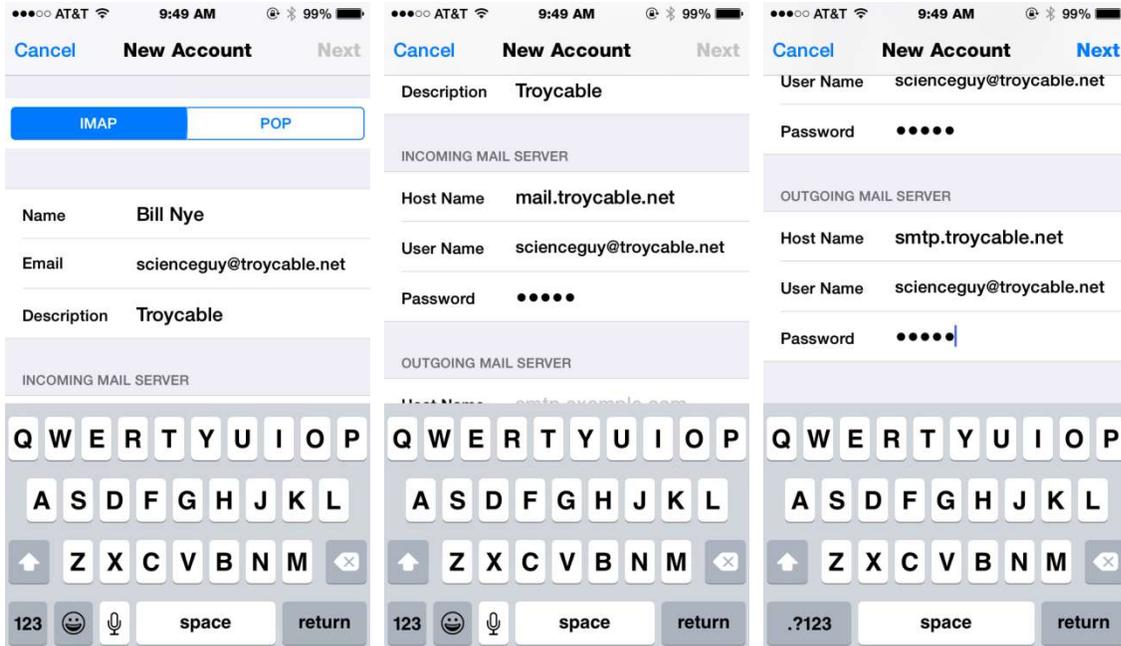

Step 5 Iphone: On the first screen input your credentials then hit Next

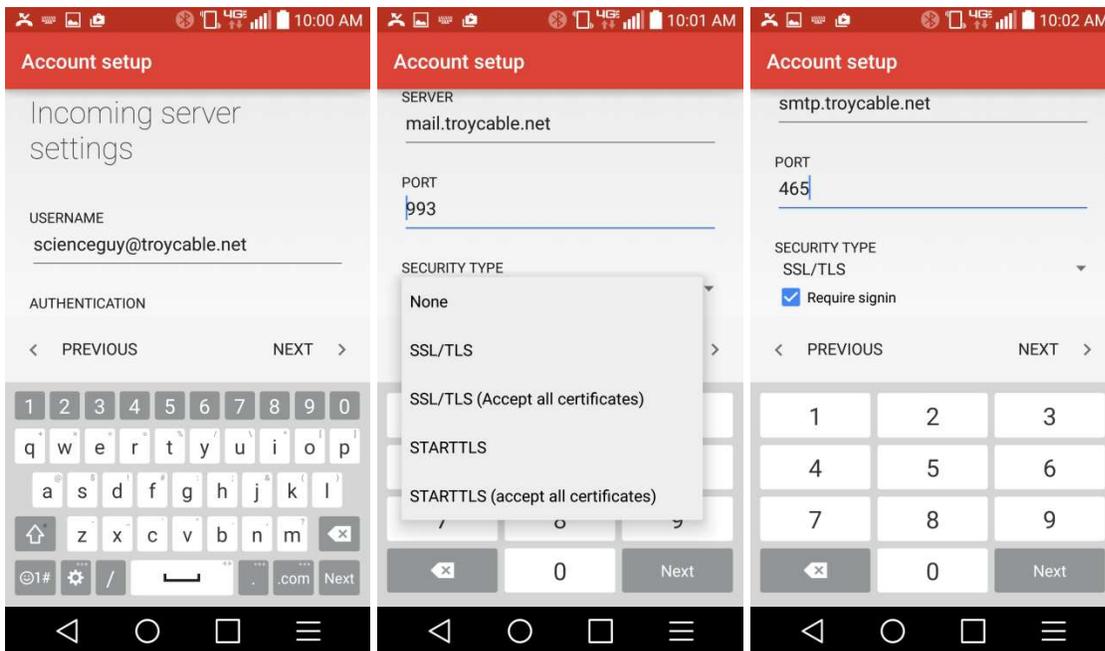

Step 5 Android: Enter email address, hit next, enter password, hit next

Step 6: Iphone: Imap is chosen, scroll down and enter the following credentials for incoming and outgoing email servers (make sure you have your email address and password for both settings) then hit next.

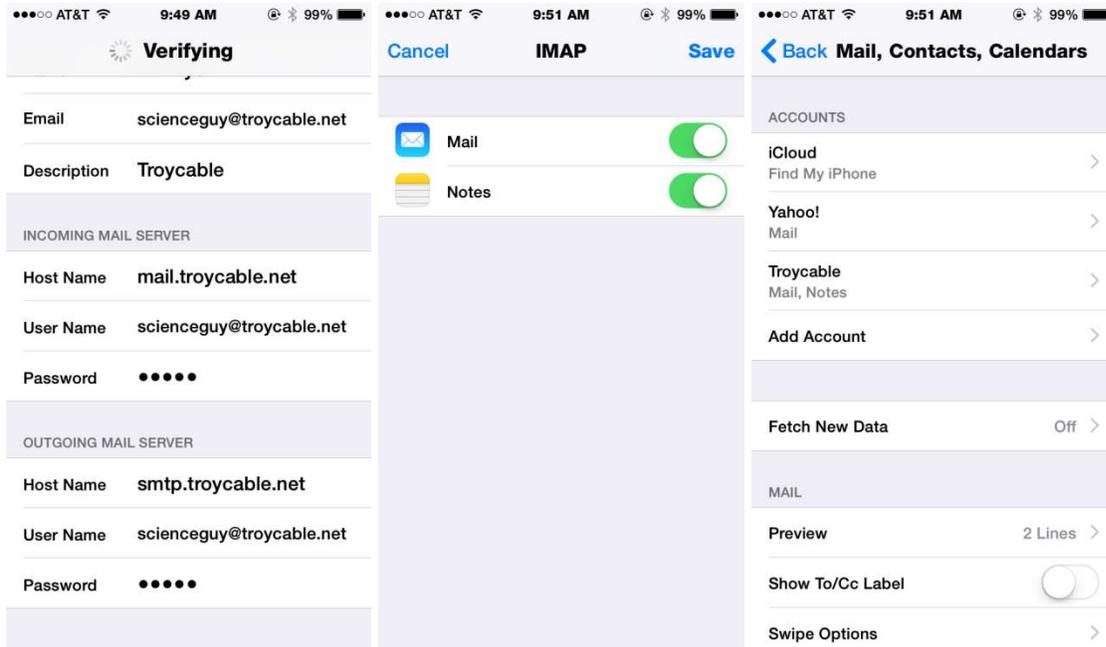

Step 6: Android: For incoming settings, the email name will already be there. Scroll down and change server name to **mail.troycable.net**. Hit the drop down for Security Type and choose SSL/TLS, hit next. For Outgoing settings, the server is smtp.troycable.net. Hit the drop down for Security Type and choose SSL/TLS, hit next.

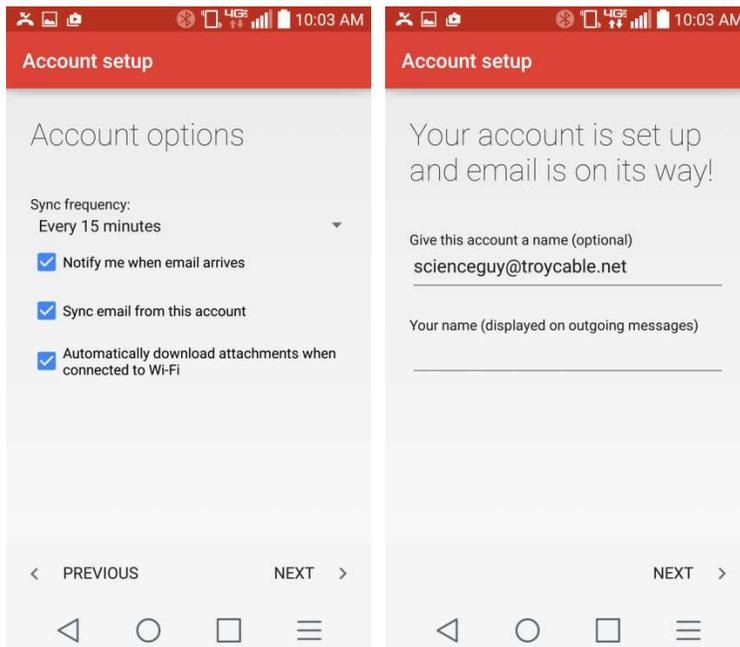

Step 7: Verification pages. If done correctly (name, passwords are correct and settings are as above), then you should see the following screens and can hit next and you'll be setup.

(below are Iphone)

(Below are Android) (You may enter your name in the last field so people see who it is from, else it will see your email address when they receive emails.)

If it still doesn't work, feel free to call Troycable Helpdesk at 334-770-HELP for assistance.
